# **KPSI 27**

- Non-Submersible Pressure Transducer
- ±0.25% FSO Static Accuracy
- Multiple Pressure Connections
- Two Year Warranty

The KPSI 27 is a non-submersible pressure transducer specifically designed for demanding industrial applications where the primary criteria are reliability and economy. These units provide repeatable, precision measurements under the most hostile conditions. Capable of measuring vacuum to pressure as high as 2000 psi (13,790 kPa), these transducers can meet most any industrial pressure measurement requirement and are available with an overmolded cable exit option for splash down applications (IP 67).

All KPSI Transducers utilize a highly accurate pressure sensor assembly specifically designed for hostile fluids and gases. The assembly is integrated with supporting electronics in a durable housing constructed of 316SS or Titanium. A wide variety of electrical and pressure connections are available to accommodate most any system interface.

Ordering Information

Notes:

1 The part number requires two pressure range limits, corresponding to the maximum and minimum analog outputs of the transducer, to be specified in pounds per square inch (psi) to three decimal places. The lower pressure range is typically 000.000 unless otherwise required. For reverse output requirements, enter the lower pressure range for the maximum output signal and the upper range for the minimum output. **Example:** 50 psi (enter 050.000)

- so par (enter 050.000)
  For sealed gage reference add local standard atmosphere (14.700 typical). Contact MEAS for assistance. Example: 150 psi + 14.700 = 164.700 (enter 164.700)
- 2 For pressure ranges >=1000 psi should be expressed in the format (xxxx.xx)
- 3 Units of measure on standard MEAS label. Contact Measurement Specialties if private labeling is required.
